

A T E C H E D H O L I D A Y

It was the night before Christmas, and Santa is in the market for a new method of transportation. He wants something a little more modern than his reindeer and sleigh. He wants your help in designing a new method of holiday travel complete with all the newest gadgets, navigation equipment, and engine designs. Here is your task:

1) Complete the following brainstorming to decide what should be included in your design:

Engine Components?

If you are unsure what to include do an Internet search for new vehicle types and see what they have or look at a daily newspaper for car ads and look at their specifications.

2) Time to start designing. On the initial idea sheet provided draw four initial ideas for a design for Santa's new sleigh. Designs should be neatly done and include labels for all features included.

3) Choose a final design and draw it full size, neatly, coloured, and labeled on the final idea page.

4) Santa's first trip in the new vehicle wasn't a smooth one. Write a story, one to two pages, about Santa's comical, hair raising journey.

5) On a blank sheet of paper design and make a colourful Holiday Card for your favourite teacher. Include a front picture and phrase, inside pictures and phrase and back picture and company info. Sign it and deliver it.
